## Prostate Disease and Management

## Localized Prostate Cancer – Unmet Need in Standard of Care

Unmet Need		
Low Risk	Intermediate Risk	High Risk
Active Surveillance		
	Radical Prostatectomy	
	Radiation Therapy	

ACTIVE SURVEILLANCE	RADICAL PROSTATECTOMY	RADIATION THERAPY
Selected Delayed Treatment	Invasive Surgery	Ionizing Radiation (multiple fractions, 8 weeks)
<ul style="list-style-type: none"> <li>Serial monitoring: Biopsy, PSA, DRE, MRI</li> <li>Psychological distress</li> <li>Biopsies painful with 3% risk of sepsis</li> </ul>	<ul style="list-style-type: none"> <li>Urinary incontinence (severe): 16% (4-31%)<sup>5</sup></li> <li>Urinary stricture (req. Tx): 9% (3-26%)</li> <li>Erectile dysfunction: 79% (25-100%)</li> </ul>	<ul style="list-style-type: none"> <li>Bowel dysfunction: 25% (0-40%)</li> <li>Urinary incontinence (severe): 4% (2-15%)</li> <li>Erectile dysfunction: 63% (7-85%)</li> </ul>
<ul style="list-style-type: none"> <li>&gt;50% patients undergo prostatectomy or radiation within 5 years<sup>3</sup></li> </ul>	<ul style="list-style-type: none"> <li>Success depends on surgeon skill</li> <li>Inpatient &amp; Weeks recovery time</li> </ul>	<ul style="list-style-type: none"> <li>Risk of secondary cancers</li> <li>Delayed response and assessment of treatment success (2 years)</li> <li>30% patients fail treatment<sup>1</sup></li> </ul>
10 yr. cost: \$29,000 <sup>2</sup>	Surgery cost: \$15,692 <sup>4</sup>	Treatment cost: \$27,564 <sup>4</sup>

**Opportunity for patients with organ confined disease for less invasive, function preserving targeted therapies that do not preclude additional intervention if needed in the future**

# MR-Guided TULSA – Closed Loop Temperature Control

## 1. Transurethral directional ultrasound ablation

- Sweeping ultrasound, continuous rotation (no risk of cold spots between discrete sonications)
- Capable of treating large and small prostate volumes

## 2. Real-time MRI & Closed-loop thermal ablation

- Real-time temperature feedback provides millimeter accuracy

## 3. Urethra and rectum cooled

- Thermal protection of important anatomy

# TULSA-PRO – Prostate Ablation From The Inside Out

Whole Gland Ablation

# TULSA-PRO – Targeted Ablation

Partial Gland Ablation

# TULSA-PRO

## Equipment

Compatible with MR from leading companies – Philips and Siemens

Robotic Arm,  
Computer Hardware

Energy  
System

Surgeon Console  
Control Room

Disposable  
Applicators

# TULSA-PRO

Customizable, Predictable, Incision-Free

Whole Gland  
Ablation

Targeted  
Ablation

Salvage Therapy  
Post Radiation  
Therapy Failure

Benign Prostate  
Hyperplasia (BPH)

## Example Prostate Tissue Ablation of Transition Zone & Suspicious Lesion

**20% of men over 50, 60% of men over 60 have BPH**

Profound technology specially suitable for large prostates >80 CC

Patient with BPH and early stage lesion

# TACT – TULSA-PRO Ablation Clinical Trial for FDA 510(k)

Pivotal study of whole-gland ablation in a clinically-significant patient population

## Study Population

- n = 115, 13 clinical sites, 5 countries
- 45 – 80 years old
- Low (33%) & intermediate risk (67%) prostate cancer

## Ablation Treatment Plan

- Treatment intent was whole-gland ablation with sparing of the urethra and urinary sphincter
- Recommended by FDA to determine substantial equivalence with predicate devices and comparison with standard of care

## Primary Endpoints (12 months)

- Safety: Frequency and severity of adverse events
- Efficacy: PSA reduction  $\geq 75\%$  (in  $> 50\%$  of patients)

## Secondary Endpoints (to 5 years)

- Prostate volume reduction at 1 year
- Prostate biopsy at 1 year in all patients
- Multi-parametric MRI at 1 year (Central Radiology Lab, Cleveland Clinic)
- Functional Disability: EPIC, IIEF, IPSS

# Prostate Ablation Efficacy – Histological Response

## TACT Biopsy Outcomes (1-year, 10-core TRUS, High Sampling Density 0.4 cc / core)

- Only 4 of 115 follow-up biopsies are missing, all due to patient refusal
- Among men with pre-treatment intermediate-risk GG2 prostate cancer, 54 of 68 (79%) were free of GG2 disease
- Of men with one-year biopsy data, 72 of 111 (65%) had complete histological response and were free of any disease
- 41% (16 of 39) of positive biopsies were clinically insignificant (Very Low Risk)
- Multivariate Analysis: Among men w. pre-Tx GG2 disease and w/o calcifications at screening, **51 of 60 (85%)** were free of GG2 disease

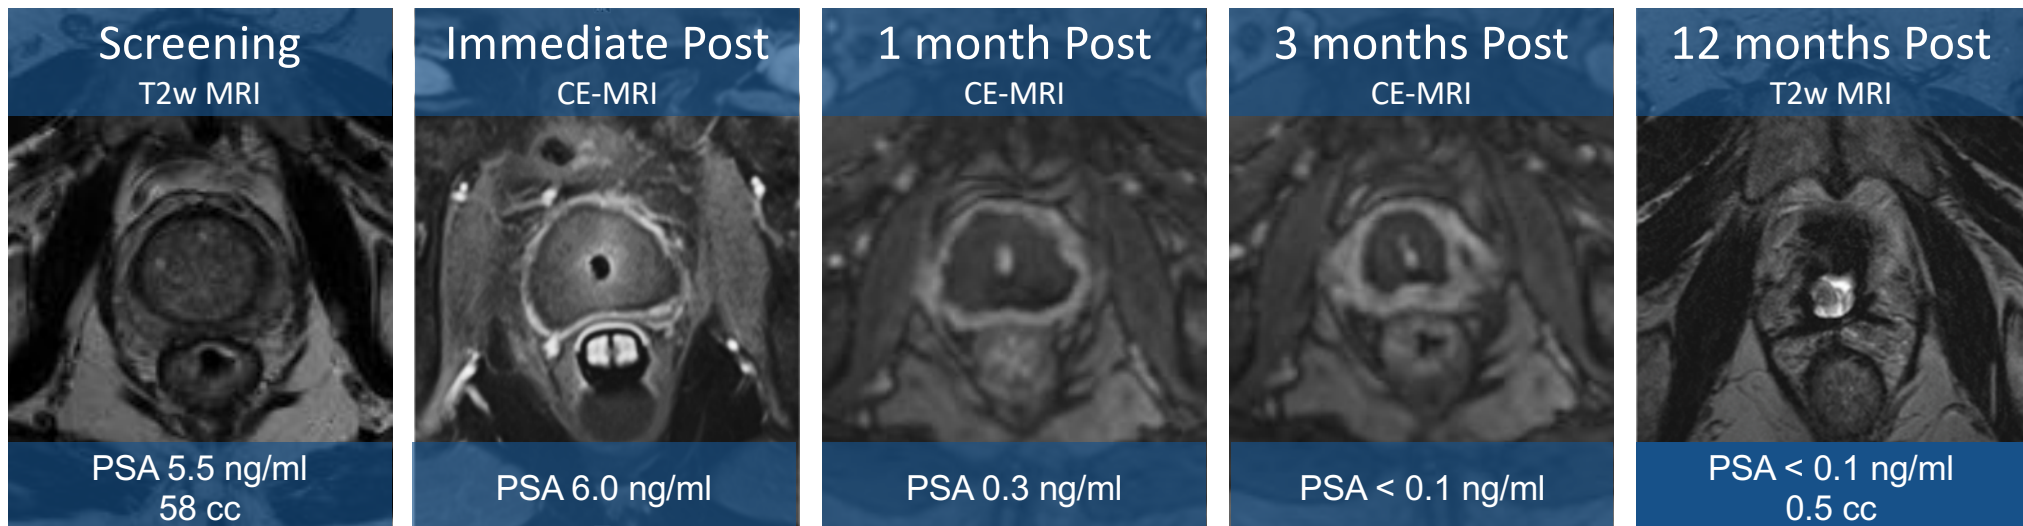

# Prostate **Ablation Efficacy** – Volume Reduction on MRI

## Prostate Volume significantly reduced demonstrating effective prostate ablation

- Median perfused prostate volume decreased from 41 cc to 4 cc, on MRI at 1 year (interim analysis by local radiologists)
- Prostate volume reduction to be re-assessed by Central Radiology Core Lab, as per TACT protocol
- Prostate ablation confirmed on Contrast Enhanced MRI immediately after TULSA and during follow-up

## Follow-up Prostate MRI predicts clinically significant disease on biopsy

- Multivariate Analysis: Absence of PIRADS  $\geq 3$  lesion at 1-year multi-parametric MRI has **92% Negative Predictive Value** for absence of GG2 disease on 1-year biopsy (interim analysis by local radiologists, to be re-assessed by Central Radiology Core Lab)

## Prostate Ablation Efficacy – PSA

### PSA Primary efficacy endpoint resolutely met

- Primary endpoint of PSA reduction  $\geq 75\%$  was achieved in 110 of 115 (96%)
- Median (IQR) PSA reduction was 95% (91-98%)
- Median PSA nadir was 0.34 (0.12-0.56) ng/ml

	Pre-Treatment	1 Month	3 Month	6 Month	12 Month	PSA NADIR
N	115	113	115	115	115	115
Median	6.26	0.53	0.46	0.53	0.53	0.34
IQR	4.65 – 7.95	0.30 – 1.19	0.17 – 0.95	0.20 – 1.00	0.28 – 1.25	0.12 – 0.56
Average	6.72	0.90	0.77	0.77	0.93	0.51
T-Test against baseline		<0.001	<0.001	<0.001	<0.001	<0.001

Missing values are interpolated using the LVCF method for the first timepoint after treatment.

# TACT Erectile Function – Surgeon & Patient Reported

## Erectile Function, at one year:

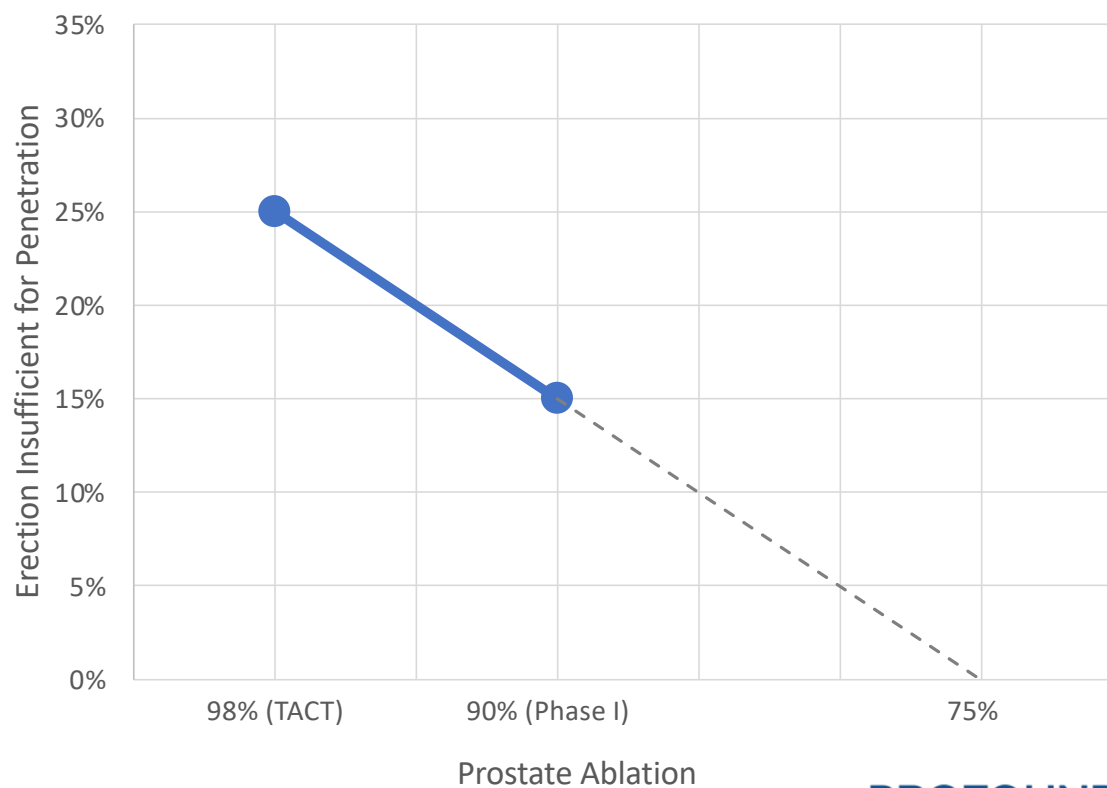

- 23% surgeon-assessed moderate erectile dysfunction (CTCAE Grade 2, intervention such as medication indicated)
- 0% any occurrence of severe erectile dysfunction (CTCAE Grade 3, intervention such as medication not helpful)
- 75% (69/92) of previously potent patients maintained erections sufficient for penetration (Patient reported, IIEF Q2  $\geq 2$ )
- Trend and recovery similar to Phase I

## Erectile Function – Control of Treatment Margin

### Effect of treatment margin on erectile function

- MRI guided treatment planning and closed-loop temperature control provide customizable prostate ablation
- Phase I and TACT studies show effect of treatment margin on erectile function
- Additional investigation may provide quantitative guidance for control of treatment margin

## TACT Urinary Incontinence – Surgeon & Patient Reported

### Urinary Incontinence, at 1 year (n=112):

- 2.6% surgeon-assessed moderate urinary incontinence (CTCAE Grade 2, pads indicated)

### EPIC Patient Reported:

- <1% (1/112) are incontinent (EPIC, > 1 pad / day)
- 3.8% increase in patients with daily leakage (EPIC, leak ≥ 1 time / day)
- 7% (8/112) wear 1 pad / day (preventative)

# Urinary Incontinence – Context to PIVOT

## Urinary Incontinence (Pad use), at one year:

- TULSA Urinary Continence ( $\leq 1$  pad/day) similar to Observation (control) arm of PIVOT study
- TULSA Pad-Free Continence (no pads) only 5%-points lower than Observation (control) arm of PIVOT study
- TULSA continence outcomes markedly superior to Radical Prostatectomy arm of PIVOT study
- PIVOT: Wilt *et al*, The New England Journal of Medicine, 2017

## Real World Context and Outcomes

	Prostatectomy <sup>1-4</sup>	Radiation <sup>1-5</sup>	HIFU <sup>6-8</sup>	TULSA (TACT)
Biopsy / Histology	16 – 24% Pos. Surg. Margin (Meta-Analysis, Tewari <i>et al</i> 2012) 10 – 15% Pos. Surg. Margin (RCT, Yaxley <i>et al</i> 2016) 24% Pos. Surg. Margin (ProtecT, Hamdy <i>et al</i> 2016)	50% Negative (Complete response) 25% Insignificant disease (Positive w. treatment effect) 25% Positive clinically significant Pca (Meta-Analysis Page 5, Approx. No.)	59 – 61% Negative (Complete response, FDA IDE Studies DEN150011 & K153023, Intent to treat analysis) 63% Negative, after 40% having repeat HIFU and 39% ADT (n=774, Crouzet <i>et al</i> 2013)	65% Negative (Complete response) 14% Insignificant disease (GG1, ≤2 cores, < 50% CCL) 21% Positive clinically significant Pca
Erectile Dysfunction erections insufficient for penetration	79% (Range: 25 – 100%)	63% (Range: 7 – 85%)	58% (Range: 38 – 67%)	20% – 25% - Grade 2 medication indicated. No Grade 3 ED
Urinary Incontinence moderate to severe	15% (Range: 0 – 50%)	4% (Range: 2 – 15%)	3% (Range: 3 – 22%)	2.6% - Grade 2 pads indicated. No Grade 3 Incontinence
Urethral Stricture moderate to severe	9% (Range: 3 – 26%)	2% (Range: 1 – 9%)	35% (Range: 9 – 35%)	2.6%
GI Toxicity, moderate to severe diarrhea, urgency, incontinence, fistula	15% (Range: 0 – 24%)	25% (Range: 0 – 40%)	7% (Range: 1 – 21%)	No GI Toxicity

## TULSA-PRO – Real World Clinical Approach

Bilateral Sparing

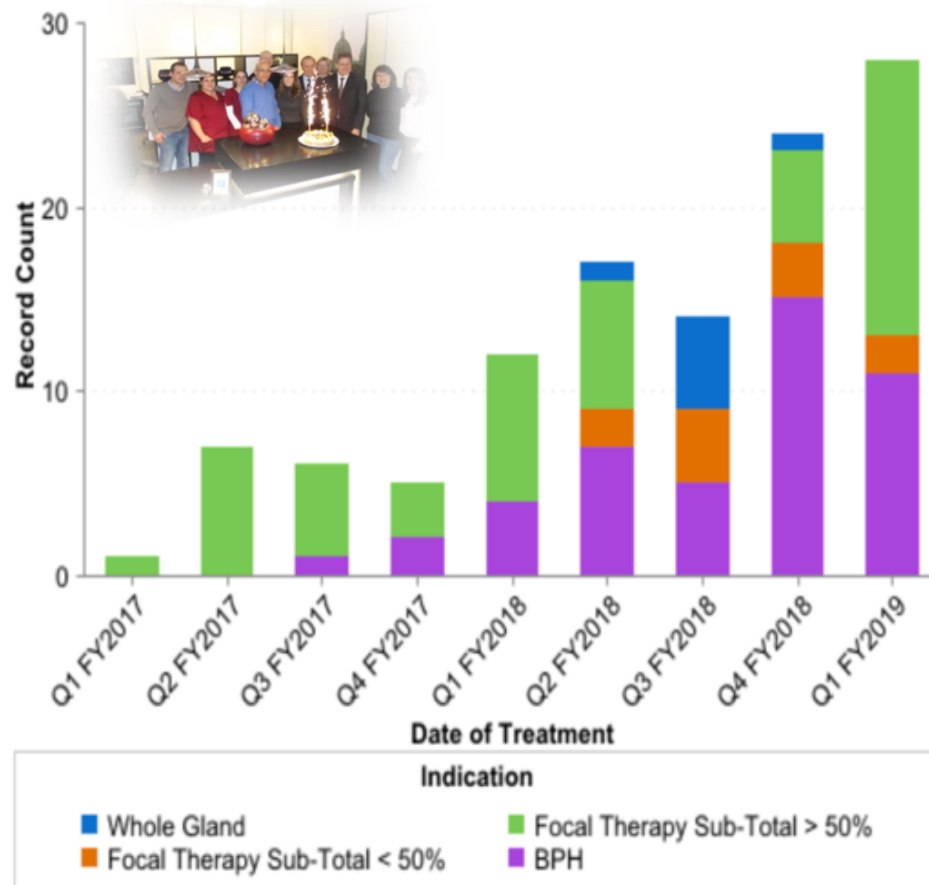

1. Safety profile superior to surgery, radiation or other ablative technologies
2. Enables Physician to optimize treatment design to maximize efficacy and minimize side effects

## TULSA-PRO – Real World Clinical Approach

1. Safety profile superior to surgery, radiation or other ablative technologies
2. Enables Physician to optimize treatment design to maximize efficacy and minimize side effects

## TULSA-PRO In Commercial Use – Example From Europe

- Initiated Q1-2017
- Methodically increased usage
- Discovered potential to treat BPH patients – Q3-2017
- Streamlined procedure – routinely 4 patients per day
- Increased utilization rate in 2019

## TULSA-PRO Inside-Out Prostate Ablation

### Customizable

- Flexibility to treat various prostate conditions
- Meet each patient's exact need

### Predictable

- Confidence
- High throughput, higher revenue, lower cost

### Incision-free

- Fast patient recovery
- Repeatable if necessary

	Prostatectomy	Radiation	TULSA
Treatment type	Whole gland	Whole gland, Limited customization possible	Customized
Outcome	Predictable	Not known for up to 2 years	Immediately confirmable and predictable even for partial gland
Thru-put, Procedures /day	2 typically, 3 if longer day	Multiple sessions - 5 to 40 over 4 - 8 weeks	Consistently 4 in a routine day. Higher possible
Patient recovery	Weeks	Deterioration over time	2 days

---

## TULSA-PRO Total Addressable Market: Pre-reimbursement

New Prostate Cancer Diagnosis (US + Canada)	180,000 <sup>1</sup>
BPH, Prostates, surgical candidates, Unusual shapes (US + Canada)	400,000 <sup>2</sup>
Total Opportunity, # of patients	580,000
Total Addressable Market, patient paid is 5 -10% of total opportunity	29,000 - 58,000
Add selected International markets (UK, Germany, Japan)	14,500 - 29,000
Total patient pay addressable market # of patients	43,500 - 87,000
Addressable market, \$4,000 per patient (includes: disposable + amortized capital + service)	\$174 – 348 M
Achievable share in X years, 25% ( <11,000 patients per year) TULSA Installed base = 110 at treatment rate 100 patients/year	\$43.5 – 87 M

### References:

1. Prostate cancer: 175,000 new prostate cancer diagnosed each year in US according to American Cancer Society
2. BPH: 300,000 surgeries based upon CMS data, + 1% of 10 Million BHP patients in United States + Canada

---

## Prevalence Market Opportunity – Prostate Cancer

Estimated Active Surveillance (AS) Population	5.5 million			
Addressable AS Market – Patient Pay (5%)	~ 275,000			
Penetration of AS Patient Pay Population	5%	10%	20%	30%
Patient Pay AS Market	\$55 M	\$110 M	\$220 M	\$330 M

## TULSA-PRO Total Addressable Market – Additional Clinical Studies

Title	Purpose	N	Status/Comments
Radio-Recurrent Cancer/Palliative Care	Inclusion in NCCN guidelines	75-100	<ul style="list-style-type: none"> <li>• EU validation trial in progress</li> <li>• US study in H1-2020</li> </ul>
Prostate Cancer: Focal/Disease Targeted Therapy. MR visible tumors	Adoption, Reimbursement	200+	<ul style="list-style-type: none"> <li>• Registry – EU H2-2019</li> <li>• Active discussions in with Advisory Board in US</li> </ul>
Prostate Cancer	Reimbursement	Level 1 trial N = 250 – 300	<ul style="list-style-type: none"> <li>• Active discussions with Advisory Board in US now that TACT is complete</li> </ul>
BPH, focus on surgical candidates	Adoption, Reimbursement	Level 1 trial N = 200-250, six month outcomes	<ul style="list-style-type: none"> <li>• Validation studies – TURKU, ALTA.</li> <li>• Initiate US study in H1-2020</li> </ul>

# SONALLEVE

## Technology platform for:

- Uterine Fibroid Treatment
- Bone Metastasis Pain
- Pediatric bone
- Hyperthermia

Over 200 publications from leading US and European clinicians and hospitals

CE Marked  
CFDA Approved

# Uterine Fibroid

## Symptom Relief & Durability

In normal commercial use, over 85% of patients experienced sustained symptom improvement

Months post-procedure	Patients available for follow-up	Symptom improvement		
		Improved	No relief	Worse
3 months	105	90 (85.7%)	14 (13.3%)	1 (1%)
6 months	99	92 (92.9%)	7 (7.1%)	0
12 months	89	78 (87.6%)	11 (12.4%)	0

Durability of the therapeutic effect compared to other uterine preserving treatments

Need for alternative treatment	@ 12 month	@ 24 month	References
<b>Myomectomy</b>	10.6 %	13-16.5 %	1,2,3,4
<b>UAE (Uterine Artery Embolization)</b>	7-10 %	12.7-23.7 %	5,6,7
<b>MR-HIFU/MRgFUSNPV &gt;60%</b>	6 %	13 %	8

---

## Sonalleve – Uterine Fibroid

Data compelling as presented

Focus on Asia

1. Reference site in S. Korea, treating 200 patients per year
2. Top tier hospitals in China  
First site led by the President of Radiological Society of China

---

## Sonalleve – Platform

### Additional applications

1. Pain management
2. Osteoid Osteoma
3. Pediatrics
4. Pancreatic cancer
5. Hyperthermia
6. Neuro-modulation

### Strategy:

Partner with Cologne and the FUS Foundation to continue to develop clinical data.

**Deploy recurring revenue business model for all new clinical applications**

---

## Summary

- TULSA - looking forward to 510(k) clearance
- Business model is capital efficient
  - Tulsa focus on US at key teaching hospitals and private clinics
  - Sonalleve focus on Asia
- Patient-pay TAM \$50 - 100 Million per year
- Potential to expand TAM by 10X following reimbursement
- Future investments
  - Efficient sales team
  - Market expanding clinical trials
  - Continued product evolution

A photograph of a family in a nursery. A woman in a teal shirt and jeans is sitting on a grey rug, holding a baby. A man in a grey shirt is sitting next to her, holding a colorful ring toy. In the background, there is a white crib and a wall with a colorful tree mural. A semi-transparent blue box with white text is overlaid on the image.
