

Description	
Job Title	MR Technologist/ Test Technician
Reports to Title	Senior Systems Engineer
General Accountability	<p>Our mission is to Profoundly change the standard of care by creating a tomorrow where clinicians can confidently ablate tissue with precision; a tomorrow where patients have access to safe and effective treatment options, so they can quickly return to their daily lives. Changing the standard of care is part of our fabric. We are a group of energetic, problem-solvers focused on innovation, and looking to change the world. If you want to make a Profound impact with your career, here is your chance.</p> <p>The MR Technologist / Test Technician is a fundamental contributor to improving quality of our product by providing feedback to product specialists and engineering. They are responsible for system level MR scans which produce high quality images and meet relevant quality assurance parameters. This role is also responsible for system installation and calibration. Actions taken to correct system deficiencies are documented and records maintained for the Company. The individual requires significant schedule flexibility as access to MR scanners is typically limited to off hours and various hospital facilities in the GTA. Some sites are in Europe and significant travel may be required.</p> <p>In this role as the MR technologist/test technician is also responsible for the testing, verification and maintenance of PMI's products. This encompasses software, hardware, system aspects of the products as well as integration of third-party products. The role is responsible for developing the test plans; design, planning, execution, and reporting of all activities required to verify conformance to defined acceptance criteria.</p>
Duties and Responsibilities	<ol style="list-style-type: none"> 1. Conduct MR testing on-site (typically Hospital sites on off hours, Schedule and travel flexibility is a requirement) 2. Ensure MR scans and related tests produce high quality output through technical and quality evaluation of the images and related data evaluation. 3. Perform system installation and calibration of Company equipment 4. Prepare and release verification and validation protocols and associated reports. (collecting data, perform data analysis ,write test records, and verification reports) 5. Troubleshoot product issues at customer sites and identify product usability issues. 6. Document service records and activities according to the Company's QMS processes

	<ol style="list-style-type: none"> 7. Create, update and execute test protocols for the hardware, software, and systems aspects of the company’s products with specific focus on MR testing. 8. Develop testing systems to reduce or eliminate MR testing where possible. 9. Investigating methods of increasing efficiency in testing, developing test suites, and verifying that adequate test coverage is applied. 10. Perform verification MRI testing and writing verification reports 11. Run regular phantom testing with new revisions of equipment/software at MRI site(s) 12. Participate in risk management activities 13. Investigate complaints, perform root cause analysis of failures, and propose remediation in a timely fashion.
