Software Developer

Are you a developer searching for a job which makes a difference, or even saves lives? Would you like to join us developing novel incision-free alternative technologies to traditional surgical treatments?
We are looking to hire skilled and experienced software developer to help us expand our offering to include new clinical applications.

Selecting us, you will be working with an integrated SW platform with Windows desktop application, MR scanner and several real-time embedded components. While your main responsibilities will lie in developing therapy console software with C# / C++, you have possibility to broaden your skills to the embedded development as well.

Preferred skills and experience:
- At least 3 – 5 years of earlier experience in the software development field using C# / C++
- Experience using scripting languages, e.g. Python, to boost development and testing
- Knowledge of desktop application development and/or graphical user interface development
- Knowledge of .NET and/or Qt Frameworks
- Ability to create high quality code by utilizing unit tests and test automation tools

We will offer to you:
- Opportunity to work in a high-tech industry that saves lives
- Flexible working hours
- International teams
- Competitive salary with benefits

Profound develops customizable, incision-free therapies which combine real-time Magnetic Resonance ("MR") imaging, thermal ultrasound and temperature feedback control for the radiation-free ablation of diseased tissue.
In our Vantaa office, we are developing Sonalleve®, an innovative therapeutic platform that is CE marked for the treatment of uterine fibroids and palliative pain treatment of bone metastases.
