

PROFOUND

Electronics Engineer

Are you searching for a job which makes a difference, or even saves lives? Would you like to join us in developing a novel incision-free alternative technology to traditional surgical treatments?

We are looking to hire Electronics Engineer to collaborate with hardware team to help us upgrade our HW architecture.

You should have some practical experience on designing electronics and using design tools.

This position is for a temporary contract of 1 year and may be suitable for someone needing more work experience to boost up the carrier. Also experienced trainees are considered.

Your tasks will include at least modifying existing PCBA designs, guiding PCB layout work, building test setups and prototypes, designing cables and documenting the designed items. Experience on Medical systems is not needed.

We are looking for someone full of energy and with hard working attitude to grow in the position.

We are offering

- 1 year contract
- Opportunity to work in a high tech industry that saves lives
- International teams
- Flexible working hours
- Smartum lunch and recreational benefits
- Occupational healthcare on a private clinic
- Free use of in-house gym/sauna/pool
- Only 100 m distance to Jumbo shopping center and Flamingo amusement center

Profound Medical develops customizable, incision-free therapies which combine real-time Magnetic Resonance (“MR”) imaging, thermal ultrasound and temperature feedback control for the radiation-free ablation of diseased tissue.

In our Vantaa office, we are developing Sonalleve[®], an innovative therapeutic platform that is CE marked for the treatment of uterine fibroids and palliative pain treatment of bone metastases.
